Market Update:

The U.S. Federal Reserve has held the policy interest rate unchanged at 5 consecutive meetings, from September 2023 to March 2024, as it monitors inflation developments closely. Inflation has been coming down, but the rate of decrease has been slowing since mid / late 2023. Headline inflation was 3.5% as of March 2024, the highest rate since September 2023, prompting fears of a re-acceleration of inflation. As such, the 10-year U.S. Treasury yield jumped from 3.88% at the end of 2023 to 4.20% at the end of Q1 2024. The U.S. economy added 303,000 jobs in March 2024, while the unemployment rate stood at 3.8%, the midpoint of the 3.7% - 3.9% range that the rate has been in since August 2023. The job market numbers are indicative of a healthy economy. However, stable inflation and a strong U.S. economy can be disruptive to the Federal Reserve's rate cut projection, and this can keep the policy rate somewhat anchored until more progress is achieved or a risk factor becomes apparent.

In Q1 2024, spreads decreased for investment grade, high yield and emerging market bonds, bolstering returns. However, the increase in U.S. Treasury yields during the period was a headwind for fixed income returns generally. Investment grade bonds declined 0.26% during the period, while high yield and emerging market bonds returned 1.95% and 1.40%, respectively.
